**What’s cool? The Kole Audio KMX subwoofers.** A revolutionary design in a direct-coupled aluminum dust cap increases thermal transfer from the voice coil by 50%. At the same time, the newly designed dust cap lowers the resonant frequency of the subwoofer, thereby extending the low-end. Our acoustical engineers achieved their goal in making these woofers handle 56% more power over conventional designs without sacrificing sensitivity.

**Common Features:**
- 2-Piece Die Cast Aluminum Basket
- Non-Pressed Paper Cone with Aluminum Dust Cap
- Large Roll Treated Foam Surround
- Woven “Through-the-Spider” Tinsel Leads
- Dual CONEX Spiders
- Dual 2-Ohm BASV/Kapton Hybrid Voice Coil
- 1-Piece Rubber Gasket
- Black/Yellow Wrinkle Coat with Diamond Cut Finish
- Heavy Duty Connectors

TO CAP OR TO CELL... THAT IS THE QUESTION!
Often called a “power cap” or “stiffening cap”, some people prefer caps over secondary batteries. A second battery is great for high power systems, but should be accompanied by an upgraded alternator that can efficiently charge both batteries. This gets expensive. A cap stores power too, but can charge and discharge in a fraction of a second, depending on size. While great for transient peaks in music, it does not have the stamina that a battery has and is not an equivalent substitute.

Our Cap Cells are a fusion of both products. The Cap Cell offers auxiliary power with the ability to enhance the transient notes, often suppressed in car audio systems with an OEM battery, while being able to reinforce the battery during long, intense bass notes. A second alternator is not necessary, making the Cap Cell a perfect addition and an affordable way to supply the necessary power for a system.
